

A 'Safety First' mentality keeps babies safe & happy.

Infant teachers, assistants, and floaters, please note:

- Use the gate when entering or exiting the gate system, without exception.
- Use both hands when moving infant equipment such as exersaucers or bouncy chairs. It is not acceptable to move equipment while holding a child in your arms. It puts you and the child at risk.
- Equipment, chairs, large boxes, etc. should not be lifted or carried over a child. Walk or carry items around the child.
- Avoid changing the design of the gate system. It is 'purpose designed'.

These simple precautions can prevent serious injuries!

OCFS Regulation 418-1.8 (a) The child day care center must employ or have available staff who will promote the physical, intellectual, social, cultural and emotional well-being of the children.

MSA High Quality Indicator 9.2d Care of infants is consistent with CFOC standards, especially with respect to sleeping, bottle-feeding, diapering, sanitation, nurturing, and daily interactions.
