

## Pre-K Math - Unit 3 - Supplemental Centers for December

Offer these centers throughout the month of December, to supplement weekly plans with seasonal content.

### Pompom Patterning

Vary colors to coordinate with additional holidays

### Gingerbread Man Bingo

Click [here](#) for additional instruction on this activity.

### Cube Measuring

Use unifix cubes to measure assorted holiday photos/drawings/toys/candy canes. Choose and prepare what you would like children to measure based on their interests.

### Gingerbread Man Measuring

Measure the gingerbread man using paper peppermints or candy canes then have children compare these measurements to their own height.

### Tree Decorating

Create an invitation to play by preparing several paper trees, stars (each with a different number), and buttons. Children will choose a star, place it on the tree top, then count out and place the coordinating number of buttons.

### Arranging Lengths of Ribbon

Encourage children to arranging lengths of ribbon by size. It may also be fun to center them to build a Christmas tree shape. Consider making this a multi-day project: For example, Day 1 could be cutting lengths of ribbon to a certain size (cut a ribbon as long as this line of unifix cubes). Day 2 could be sorting and arranging by length.
